AI/GEN AI ENGINEER

Generative AI | LLMs| RAG | LangChain | LangGraph | Machine Learning | Predictive Modeling

CAREER SUMMARY

AI/ML Engineer with 3+ years of experience designing and developing AI-driven solutions across Machine Learning and Generative AI domains. Experienced in building Large Language Model (LLM) applications, Retrieval-Augmented Generation (RAG) systems, and LangGraph-based agentic workflows for intelligent automation and information retrieval. Proficient in Python, prompt engineering, vector databases, semantic search, and end-to-end AI application development. Possesses a strong foundation in predictive modeling, classification, model evaluation, and machine learning algorithms, enabling the delivery of scalable and data-driven AI/ML solutions.

SKILLS

- **Programming Languages:** Python, SQL
- **Generative AI & LLMs:** Generative AI, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Agentic AI, Prompt Engineering, Semantic Search, Vector Embeddings, Vector Databases
- **AI Frameworks & Tools:** LangGraph, LangChain, Model Context Protocol (MCP), FAISS
- **Machine Learning & Deep Learning:** Machine Learning, Deep Learning, Natural Language Processing (NLP), Supervised Learning, Classification, Feature Engineering, Model Evaluation, Predictive Analytics
- **Libraries & Data Processing:** Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn
- **Deployment:** Git, GitHub, Azure

WORK EXPERIENCE

Mobicool Software Solutions Private Limited, Pune

AI/ML Engineer| June 2023 – Present

- Developed and enhanced AI-powered applications leveraging Large Language Models (LLMs), Generative AI, and Retrieval-Augmented Generation (RAG) architectures to automate information retrieval, knowledge discovery, and content generation workflows.
- Designed and implemented intelligent assistants, document intelligence solutions, and semantic search systems using vector embeddings, vector databases, and modern AI frameworks to deliver context-aware and accurate responses.
- Applied Machine Learning techniques, predictive modeling, feature engineering, and model evaluation methodologies to develop scalable AI/ML solutions that supported business decision-making, process optimization, and data-driven insights.

PROJECTS

- **Academic Research Automation Agent**

  Technologies Used: Python, LangGraph, OpenAI LLM, ArXiv API, Tectonic

  Project Description:

  Developed an AI-powered research automation platform leveraging Large Language Models (LLMs), LangGraph, and agent-based workflows to automate the discovery, retrieval, analysis, and summarization of academic research papers. Integrated the ArXiv API for intelligent literature retrieval and utilized LLM-driven reasoning to extract key insights and generate structured research reports. Automated report generation and knowledge synthesis capabilities significantly reduced manual effort in conducting comprehensive literature reviews and research analysis.

- **RAG Based HR Recruitment Assistant**

  Technologies Used: Python, RAG, OpenAI Models, FAISS, PyPDF

  Project Description:

  Developed a Retrieval-Augmented Generation (RAG)-based recruitment assistant to automate candidate screening, resume analysis, and shortlisting workflows. Implemented resume ingestion and information extraction using PyPDF, embeddings, and FAISS vector search, enabling semantic matching between job requirements and candidate profiles. Leveraging RAG and Large Language Models (LLMs), the system intelligently ranks and recommends top-matching candidates based on required skills, qualifications, and experience, significantly improving recruitment efficiency, screening accuracy, and hiring decision-making.

- **Credit Risk Assessment Model**

  Technologies Used: Python, Scikit-learn, Machine-Learning Models, Pandas, NumPy

  Project Description:

  Developed a Machine Learning-based credit risk assessment solution to evaluate customer creditworthiness and predict loan default risk using predictive analytics and classification techniques. The project involved data preprocessing, feature engineering, model training, and performance evaluation of machine learning algorithms including XGBoost and Random Forest. The resulting solution generated data-driven risk insights to support lending decisions, improve risk management processes, and enhance the accuracy of credit risk prediction.

EDUCATIONAL CREDENTIALS

B.E. - Information Technology • Vasavi College of Engineering, Hyderabad • Completed in 2023
